OUR REPORT TO YOU

2013-2015

ARE YOU IN THE BIG PICTURE?

Photo from June 25, 2015 Celebration (photo by Karen Preuss)

Celebrating Achievements, Prioritizing Climate

Thank you!

No greater privilege exists than working to leave this planet in better shape for those who come after us. We have an incredible opportunity to go beyond what seems reasonable or possible.

The climate crisis impacts everyone and everything, including our air, water, food, and security. Those we love so dearly, our children and grandchildren, will bear the burden. Therefore, we must prioritize climate.

Sonoma County is leading California in climate action, and California is leading the nation. When we created this organization in 2001, our vision was to be so amazing that we inspired other communities. The [White House recognition](#) of Sonoma County as a Climate Champion in December 2014 confirmed that our vision is becoming a reality.

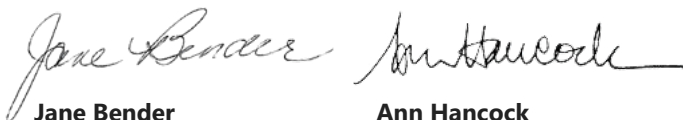

Our biggest achievement to date is Sonoma Clean Power, a Community Choice Energy program. It took a village to make this happen. The Center for Climate Protection now is spreading the word about Community Choice across California. As we reach out statewide, we also continue to incubate local solutions.

Besides Community Choice, highlights of other climate solutions we are working on include:

- » Developing youth leaders to assume responsibility in the future
- » Supporting leadership from business, the engine of change
- » Accelerating solar energy deployment
- » Promoting transportation solutions with an emphasis on electric vehicles

We – the board, staff, and advisors – are investing in the Center's five-year strategic plan to reduce greenhouse gas emissions and create model programs for communities everywhere. Only with your support does this work happen. We hope you are inspired by the Center for Climate Protection's achievements and momentum, and that you join us and stay with us. Thank you for being part of the solution!

Sincerely,

Jane Bender
Board President

Ann Hancock
Executive Director

"I don't want to get paralyzed by the magnitude of this thing. I'm a big believer that imagination can solve problems."

— President Barack Obama

Delivering Solutions: Community Choice Energy

48%

GHG reductions, compared with PG&E's last published data in 2013; lowest GHG emissions of any default service in California.

\$207,000

Paid to "NetGreen" customers in 2014; one-third of that to schools.

An energy revolution is underway.

Right now, the technology exists to deliver a majority of our power from clean, local sources.

In 2005, the Center for Climate Protection identified that *Community Choice* was the most powerful, cost-effective solution under local control for significantly reducing our greenhouse gas emissions. We began informing and building consensus among business, government, and the community to establish a Community Choice Energy program. Sonoma Clean Power, California's second operational Community Choice program, began serving customers in May 2014.

Now, Sonoma Clean Power is beating even optimistic projections for emission reductions, rates, enrollment levels, and revenue generation. It's also exceeding our expectations to inspire. Last year, about 18 California communities were considering Community Choice. Now there are more than 70.

**70
Megawatts**

SCP's investment in solar is enough to power about 22,000 homes.

**\$13.6
million**

Consumer savings on electricity bills.

What is Community Choice Energy?

Community Choice is a local energy program that buys and generates electricity for business and residents. It introduces competition and choice into the electricity market with a focus on local, renewable energy to stimulate rapid innovations in clean energy systems. As local non-profit entities, Community Choice energy providers are not beholden to increasing shareholder returns, but rather to stable, competitive pricing for customers and to resilient, clean, local energy systems.

"I'm so impressed with the progress that has been made among cities and counties in California to move forward with Community Choice Energy and I believe it is because of the efforts of the Center for Climate Protection. I've collaborated with the staff for the past two years and their work has been instrumental in the progress to promote renewables, reduce GHGs, and provide customers with more choices."

— Jeff Byron, Former California Energy Commissioner, Center for Climate Protection Advisor

Mobilizing Business

BUSINESS for CLEAN ENERGY

Business is the engine of innovation.

The Center for Climate Protection's *Business for Clean Energy (BCE)* program leverages the leadership of the business community to foster creative climate solutions. BCE is a membership-based program that regularly convenes business leaders to advance innovations that improve the economy and the climate, and make it easier for all businesses to do the right thing.

In 2014, the Center inaugurated the highly successful *Business of Local Energy Symposium*. The Symposium's goal is to advance public-private partnerships to maximize local renewable resource development as affordably as possible. The 2014 Symposium drew 47 presenters and 288 participants from throughout California. Topics included energy storage, accelerating local renewable energy adoption, and electric vehicle deployment. The Center's second Symposium is March 4, 2016 in San Jose.

In the last two years, BCE has worked with its members to:

- » Urge cities to approve Sonoma Clean Power.
- » Advocate at the California Public Utility Commission to save a rate structure supporting moderate to large commercial solar installations.
- » Collaborate with government, business, and nonprofit partners to hold business forums in Silicon Valley to promote Community Choice Energy. Participants at these events included representatives from Google, Apple, Microsoft, NetApp, Intuit, Adobe, eBay, and Yahoo.
- » Explore the development of a pilot microgrid project for Sonoma County that would provide multiple benefits, including increasing the amount of local renewables and helping the grid be more intelligent and resilient.

California Energy Commissioner David Hochschild presents at the 2014 Business of Clean Energy Symposium, organized by the Center for Climate Protection.

Engaging Youth, Preparing Tomorrow's Leaders

ECO₂school empowers youth to be positive changemakers.

The Center for Climate Protection's *Youth Leadership program, ECO₂school*, inspires young people to take action for immediate greenhouse gas reductions while promoting long-term personal well-being and community-wide impact. Through the program, youth make a measurable difference by walking, biking, skating, carpooling, and using public transportation.

Greenhouse gas emissions reduced by ECO₂school

- » 2012-13: 29,800 pounds
- » 2013-14: 35,700 pounds
- » 2014-15: 40,800 pounds

In recognition of this outstanding model program, ECO₂school received the *Breathe California Clean Air Award for Education* in May 2015.

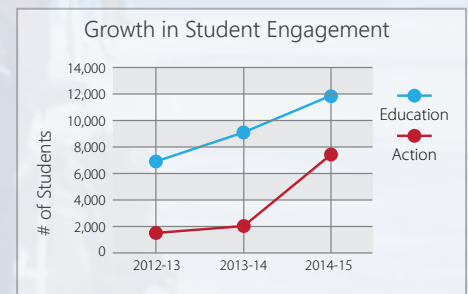

ECO₂school Youth Advisory Board

A select group of *student climate leaders* help coordinate the program, organize and speak at events, and provide a youth perspective to the larger community. Highlights of the Youth Advisory Boards's 2013-2014 activities and achievements include:

- » Organized Green Teen conference that drew 38 students from 9 Sonoma County high schools.
- » Served as keynote speaker and on panels at the Bay Area Youth for Environment and Sustainability conference.
- » Met with 33 state leaders in Sacramento to advocate for climate protection legislation.
- » Attended a Green Careers mixer to learn from professionals in the field.

Program Growth

From Fall 2012 to Spring 2015, the program expanded from seven schools to thirteen, and doubled the number of students who participated in the program.

ECO₂school Program Coordinator Paola Alvarado explains the effects of transportation emissions on our oceans.

Powering the Energy Revolution

To create a renewable energy future, solar is California's leading technology.

Sonoma County has the highest density of solar installations of any county in California. The county has experienced a solar deployment rate of about four megawatts of new capacity per year over the past decade.

Although solar installations are increasing rapidly in Sonoma County, solar still constitutes a minute portion of the total power fed into the grid. The Center is committed to helping accelerate solar installations on sunny rooftops, parking lots, ponds, and other suitable locations.

In 2015, the Center for Climate Protection brought *Solar Sonoma County* under its organizational umbrella. The merging of forces expands the Center's capacity and enhances its efforts to transform the energy sector in Sonoma County and beyond.

Solar Sonoma County's two premier programs continue under the Center's auspices.

Clean Energy Advocate helps home and business owners navigate the many solar options, guiding them to determine if solar is right for them.

Certified Local vets and brands local solar businesses to advantageously position them.

#1

Sonoma County is the nation's per capita leader of solar energy production.

Rooftop solar offers the promise of energy independence, financial security, and a healthier climate.

Driving the Future of Transportation

Electric vehicles are the fastest way to reduce our transportation footprint.

The transportation sector poses the largest climate protection challenge facing Sonoma County and California: about 65% of Sonoma County's GHG emissions come from transportation.

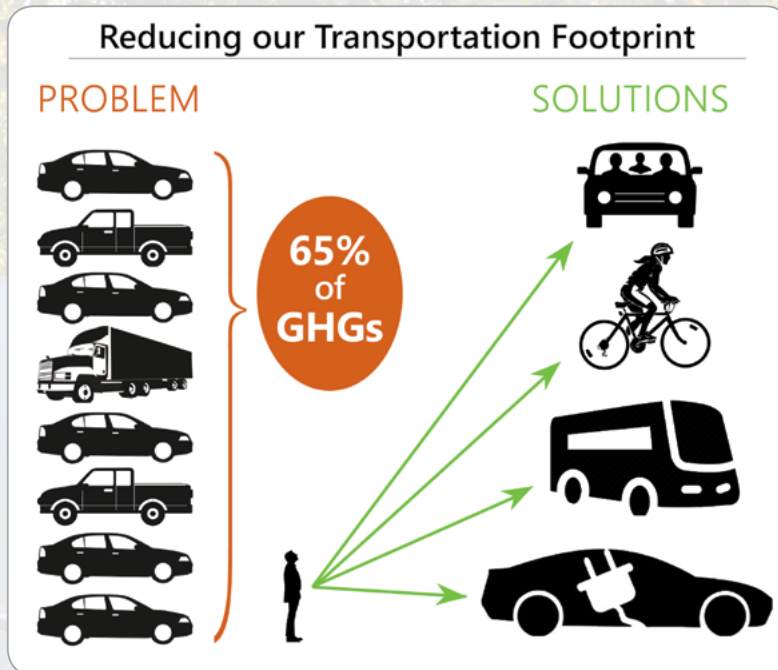

Electric Vehicles

The Center's latest effort to reduce emissions from transportation is to accelerate the switch to electric vehicles. We are convening stakeholders, assessing opportunities, and identifying key solutions. Not only are EVs good for the environment, they're also good for drivers' wallets and the local economy. Plus, they're fun to drive and more convenient than people may think.

Recently, the Center issued a [white paper](#) that describes Sonoma County's status and progress in adopting electric vehicles. The paper also identifies the greatest opportunities to accelerate the transition to an electric-powered transportation system.

Carma

From 2011 to 2014, the Center for Climate Protection worked with the Sonoma County Transportation Authority to develop Carma, a real-time carpooling program in Sonoma, Marin, and Contra Costa Counties. The program uses innovative software and a smartphone app to connect and incentivize drivers and riders who carpool. The Center's technology partner for Carma was Avego, an Ireland-based company. Although the Center is no longer working on Carma, the program continues to flourish in the Bay Area and in pilot communities worldwide.

"If we're going to get our transportation system off petroleum, we've got to get people used to a zero-emissions world."

— Mary Nichols, Chair, CA Air Resources Board

Tracking Progress, Fostering Accountability

You can't manage what you don't measure.

In 2005, the Center for Climate Protection led Sonoma County and all nine of its cities in setting the official, very bold goal to reduce greenhouse gas emissions 25% below 1990 levels by 2015. This goal corresponds to what is known scientifically as *atmospheric carbon stabilization*, the imperative for a life-sustaining climate.

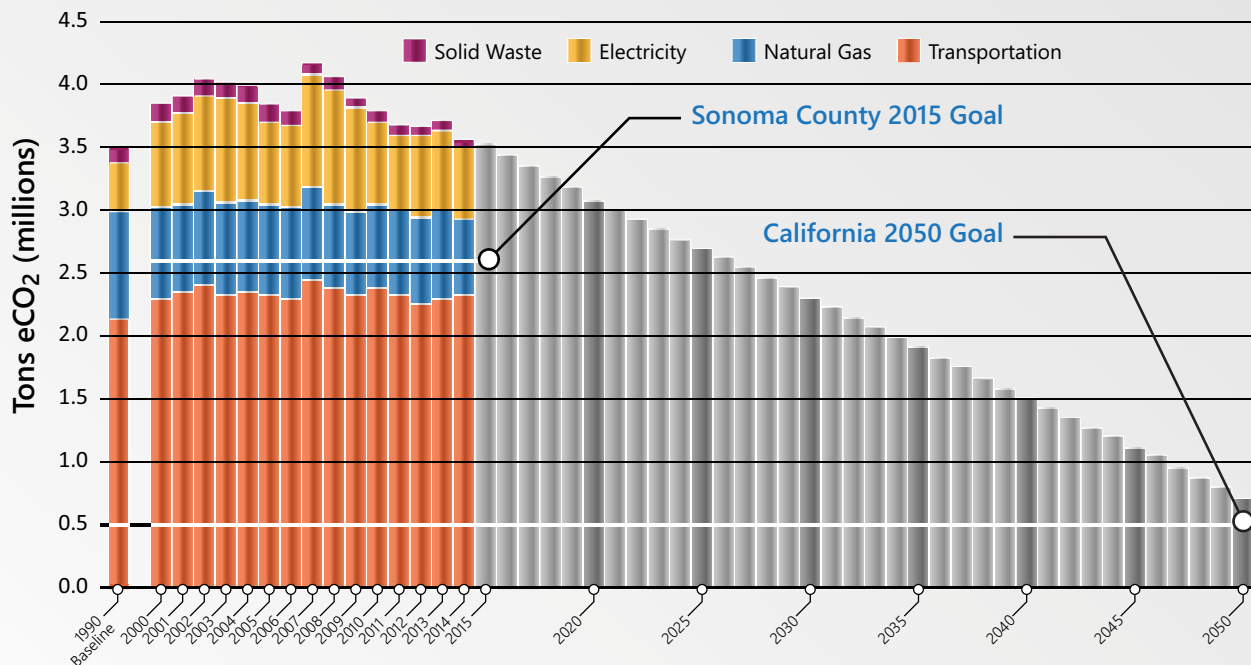

To help Sonoma County keep its focus on this goal, the Center for Climate Protection has tracked and reported on the total greenhouse gas emissions produced by Sonoma County for over a decade. Tracking shows what is really happening rather than what we hope is happening.

Our most [recent report on Sonoma County GHG emissions](#) reveals promising declines in electricity and natural gas emissions. This suggests that energy efficiency and renewable energy efforts are having a favorable impact. With the establishment of Sonoma Clean Power, we anticipate an acceleration of these trends.

However, solutions to reduce emissions in the transportation sector remains an extreme challenge, one with which communities nationwide struggle. For this reason, the Center is collaborating with partners on ways to rapidly accelerate the adoption of electric vehicles.

Sonoma County GHG Emissions, 1990-2014

Advancing Sonoma County as the Center of Solutions

White House recognition confirmed that our vision is becoming a reality.

The Center for Climate Protection is committed to accelerating Sonoma County as a *green solutions incubator*. We are pressing harder to significantly reduce emissions, enlisting more participants in the effort, and fostering more collaboration among government, business, and community leaders.

The Center focuses on speed and scale solutions that are cost-effective, practical, under local control, make it easier for everyone to do the right thing, and are so inspiring that they spread to communities everywhere. Sonoma Clean Power is an outstanding example of a solution that meets these criteria.

We periodically search across the country for climate solutions to bring to Sonoma County and the rest of California. Our most recent study, released at the beginning of 2015, found good examples but no new game-changing solutions.

In our quest for solutions, areas of current investigation include localizing and integrating energy resources, microgrids, demand response, monetizing energy efficiency, and reducing barriers to electrifying the transportation sector.

The Center...is both practical and visionary, advancing real solutions to a fundamental problem of our time."

— U.S. Congressman Jared Huffman

"You are doing some of the most important work of our time and setting an example for the rest of the country."

— Ralph Benson, former Executive Director, Sonoma Land Trust

Highlights of Achievements

2001

Climate Protection Campaign founded

2002

National precedent: Sonoma County and nine cities officially pledged to climate protection

2003

National precedent: Sonoma County and nine cities completed emissions inventories

2005

National Precedent: Sonoma County and nine cities set goal to cut greenhouse gas by 25%

2008

Community Climate Action Plan issued

2009

Sonoma County Energy Independence Program and Regional Climate Protection Authority began

2010

Windsor Efficiency PAYS program began

2011

Sonoma Clean Power exploration began by Sonoma County Water Agency

2013

Santa Rosa and 4 other cities joined Sonoma Clean Power.

North Bay Business Journal named Sonoma Clean Power year's top story

2014

Sonoma Clean Power began serving customers; remaining 3 cities joined Sonoma Clean Power

White House recognized Sonoma County as national Climate Action Champion

Expanding Our Impact

The Climate Protection Campaign is now the Center for Climate Protection.

With 14 successful years as the Climate Protection Campaign in Sonoma County, why change our name? Our mission, track record, and the urgency of the climate crisis requires that we expand our geographic reach and increase our impact while continuing to incubate solutions in Sonoma County. Our new name reflects our expanded vision and larger commitment.

Strategic plan

To fulfill our expanded commitment, the Center's board and staff created a five-year strategic plan with a focus on:

- » Helping at least 30 communities implement high-impact climate protection programs
- » Facilitating implementation of Community Choice Energy programs in at least ten communities
- » Working at the state and national levels to ensure that legislative and regulatory climate policies advance high-impact climate solutions

We refer to the plan as the **"5-5-5 Plan"** – **5** years to change **5** million people's relationship with energy for a cost of **\$5** million. ([Click here to learn more](#))

center for
climate
protection

"I believe global warming is the big moral issue of our time. I want to change the dialogue and practices around energy."

— Tom Steyer, Hedgefund manager, philanthropist, climate activist

"We share the desire and vision to bring a new level of collaboration and cooperation amongst stakeholders to maintain the quality of our environment and the future for generations to come."

— Marlene Soiland, President/Owner, Soiland Management Co., Inc.
and 2015 President of Sonoma County Alliance

Accelerating Positive Change

Early achievements in expanding our impact:

- » In 2014, the Center for Climate Protection coordinated activists throughout California to oppose and ultimately defeat Assembly Bill 2145, which was intended to stop Community Choice in California.
- » More than 70 California communities are in varying stages of investigating Community Choice Energy programs, supported by the Center for Climate Protection. Silicon Valley, the global hub of innovation, is our focus.
- » The Center gathered 288 leaders from throughout California for the Business of Local Energy Symposium in 2014, an all-day event to educate and inspire changemakers with ideas for local, renewable, cost-effective solutions. The second Symposium is March 4, 2016 in San Jose.
- » The Center is implementing ECO2school in San Francisco and the South Bay.
- » *Cap and Dividend* is the Center's top climate and equity solution. The Center's co-founder, Mike Sandler, will attend the international climate conference in Paris in December 2015 to further advocate for this important climate solution.

"Ensuring a prosperous future requires dramatic changes in how we generate, use, manage, and store energy. The Center has motivated our government, societal, and private sector leaders to all do their part in creating Sonoma Clean Power and inspiring other communities to follow suit."

— Don Green, Entrepreneur, Father of Telecom Valley

We're in this together.

You are critical to this big effort and important work. Only with your support will the Center's vision be fulfilled. We hope you **realize the urgency** of the climate crisis, **are inspired** by what we can do together to address it, are moved by the achievements and momentum described in this report, and **invest with us** ...

for the future of our children and all life.

"Climate change is a global problem with grave implications: environmental, social, economic, political and for the distribution of goods. It represents one of the principal challenges facing humanity in our day."

— Pope Francis, *Laudato Si*
