California's climate apocalypse

Fires, heat, air pollution: The calamity is no longer in the future — it's here, now

Oregon residents standing ground

BY RICHARD READ,
MOLLY HENNESSY-FISKE
AND MELISSA ETEHAD

MOLALLA, Ore. —
Christine VanOeveren grab-

BY SUSANNE RUST
AND TONY BARBOZA

In 2001, a team of international scientists projected that during the next 100 years, the planet's inhabitants would witness higher maximum temperatures, more hot days and heat waves, an increase in the risk of forest fires and "substantially degraded air quality" in large metropolitan areas as a result of climate change.

In just the past month, nearly two decades after the third United Nations Intergovernmental Panel on Climate Change report was issued, heat records were

Current global climate goals are **inadequate**

UN IPCC 1.5C Report- Oct 2018

- Cut emissions by 45% by 2030
AND
- remove up to 1000 Gt CO₂e from atmosphere
to achieve net-zero emissions by 2050 and stay under 1.5C warming

UN operates by consensus so goals are conservative and not enough.

We must do more sooner per new science...

Will pass 1.5°C dangerous warming by 2030 10 years earlier than UN IPCC projected

World may breach 1.5C warming within 5 years - WMO

<https://www.rte.ie/news/world/2021/0527/1224196-global-warming-wmo/>

Climate action delay costs trillions, bankrupting our economy

- Fed Reserve: banks must consider climate risks
- Costs much less investing big today rather than waiting until 2030 *(For CA: est. \$47 billion/year now vs. \$110 billion/year starting in 2030 based on CA =14.6% of GDP)*
- \$150 Billion in damages from 2018 CA wildfires
- \$80 Billion in 2019 wildfires costs but \$80 Billion invested in California generate ~725,000 jobs

RAISING THE ALARM

Evidence that tipping points are under way has mounted in the past decade. Domino effects have also been proposed.

A. Amazon rainforest
Frequent droughts

B. Arctic sea ice
Reduction in area

C. Atlantic circulation
In slowdown since
1950s

D. Boreal forest
Fires and pests
changing

F. Coral reefs
Large-scale die-offs

G. Greenland ice sheet
Ice loss accelerating

H. Permafrost
Thawing

**I. West Antarctic
ice sheet**
Ice loss accelerating

**J. Wilkes Basin,
East Antarctica**
Ice loss accelerating

@nature

**9 of 15 global
tipping points
underway now...
domino effect to
uninhabitable
'hothouse'
climate if we
don't act soon...**

**The climate reality
is outpacing
outdated policy.**

**Some leaders are
now stepping up,
but...**

...California is behind: New International & National Climate Targets....

- ✓ **EUROPEAN UNION:** Cut GHGs by at least 55% by 2030 ... from 1990 levels to reach net zero emissions by 2050
- ✓ **UK:** Cut GHGs 68% by 2030 from 1990 levels & 100% ZEV sales by 2030
- ✓ **RHODE ISLAND:** 100% GHG free electricity by 2030
- ✓ **PRESIDENT BIDEN**
 - Cut GHGs 50% below 2005 by 2030
 - 100% GHG free electricity by 2035
 - 40% investments to lower-income communities
 - Invest \$2 trillion (= ~\$292 Billion in CA @ 14.6% GDP)

California must lead for the country and the world to secure a climate-safe future

Need more aggressive policies and accelerated timelines in CA now!

Climate-Safe California Campaign for Rapid Decarbonization

www.theclimatecenter.org

VISION: CA will enact the bold policies required by science soon

to dramatically cut emissions, start drawdown and secure resilient communities by 2030, inspiring global action

CLIMATE-SAFE CALIFORNIA

accelerate existing state goals 15 years...

2045 is too late

- **Net-negative emissions by 2030** (drawdown greater than emissions) ([Brown 2018 EO by 2045](#))
 - 80% below 1990 GHG levels by 2030 ([Schwarzenegger 2005 EO by 2050](#))
 - Nature-based annual sequestration greater than emissions by 2030

Definition: net negative emissions is achieved when, as a result of human activities, more greenhouse gases are removed from the atmosphere than are emitted into it. – *UN IPCC 1.5C Report* <https://www.ipcc.ch/sr15/chapter/glossary/>

One pathway to Net Negative Emissions by 2030: by sector

Pathways Sector Summary and Net GHG Emissions, MMT CO₂eq

Backed up by science: “Accelerating the Timeline for Climate Action in California”

Kammen et al Mar 2021

April 13, 2021

U.S. Drought Monitor California

Accelerating the timeline for climate action in California

[Daniel M Kammen](#), [Teenie Matlock](#), [Manuel Pastor](#), [David Pellow](#), [Veerabhadran Ramanathan](#), [Tom Steyer](#), [Leah Stokes](#), [Feliz Ventura](#)

The climate emergency increasingly threatens our communities, ecosystems, food production, health, and economy. It disproportionately impacts lower income communities, communities of color, and the elderly. Assessments since the 2018 IPCC 1.5 Celsius report show that current national and sub-national commitments and actions are insufficient. Fortunately, a suite of solutions exists now to mitigate the climate crisis if we initiate and sustain actions today. California, which has a strong set of current targets in place and is home to clean energy and high technology innovation, has fallen behind in its climate ambition compared to a number of major governments. California, a catalyst for climate action globally, can and should ramp up its leadership by aligning its climate goals with the most recent science, coordinating actions to make 2030 a point of significant accomplishment. This entails dramatically accelerating its carbon neutrality and net-negative emissions goal from 2045 to 2030, including advancing clean energy and clean transportation standards, and accelerating nature-based solutions on natural and working lands. It also means changing its current greenhouse gas reduction goals both in the percentage and the timing: cutting emissions by 80 percent (instead of 40 percent) below 1990 levels much closer to 2030 than 2050. These actions will enable California to save lives, benefit underserved and frontline communities, and save trillions of dollars. This rededication takes heed of the latest science, accelerating equitable, job-creating climate policies. While there are significant challenges to achieving these goals, California can establish policy now that will unleash innovation and channel market forces, as has happened with solar, and catalyze positive upward-scaling tipping points for accelerated global climate action.

Guiding principles for Climate-Safe CA targets, policies and programs

- 1- Based on the **latest science**
- 2- Ensure a **just transition** for fossil fuel workers
- 3- Prioritize **climate justice**: ensure lower-income & BIPOC communities are no longer disproportionately harmed by fossil fuels and have equitable access to climate-friendly solutions

Diablo Agreement for the State

Labor,
environmentalists,
industry and
government come
to an agreement
on what is needed
for a smooth
transition – and
now to renewables

TYPES OF POLICIES REQUIRED BY SCIENCE TO REACH NET-NEGATIVE EMISSIONS BY 2030

- 1. Accelerate the phase-out of fossil fuel development, production and use**
- 2. Scale-up nature-based sequestration to 100 MMT/year by 2030 on natural & working lands**
- 3. Invest in community resilience, including clean energy microgrids & storage**
- 4. Fund climate action with \$12-20 billion/year and leverage private sector money**

SB 582 (Stern): Climate Emergency Mitigation, Safe Restoration, and Just Resilience Act of 2021

Would establish:

- state's first ever statutory net-negative emissions goal, with a target date of 2035
- 80% below 1990 levels by 2030
- Just Resilience Plan to drive urgently needed investments in California's most vulnerable communities
- Establish "carbon removal" goal before 2035
- CARB determines 40-80% by 2030
- Prioritize vulnerable communities

<https://theclimatecenter.org/our-work/legislation/>

SB 99 (DODD): Plan and prioritize Clean Energy Resilience for communities that suffer most from air pollution and outages

Creates a new CEC program to support local governments in vulnerable communities to plan local energy systems and microgrids for decarbonization, resilience, equity
