OhmConnect

Leveraging a Network of Partnerships to Control Home Energy Use

OhmConnect is the hub of a growing network of partnerships that manages home energy use to ensure grid reliability

- OhmConnect already manages more than 250,000 smart thermostats, appliances, and other energy-using devices in its customers' homes in CA, NY, TX and Australia. Through the merger to become Renew Home, this number will increase exponentially
- By reducing energy use during peak times, and shifting energy use to off-peak times, OhmConnect can play a critical role in ensuring grid reliability

2:40 - 3:40

Virtual Power Plants for a Climate-Safe Electricity Grid

2:40 PM – 3:40 PM

CALIFORNIA'S ENERGY FUTURE
