Carbon Removal Standards Initiative

Anu Khan
Founder and Executive Director

1. Carbon removal is a public good.

2. Carbon removal supply and demand will be driven by policy.

3. Carbon removal solutions will be embedded across regulated industries: agriculture, mining, waste management, and more.

Mission

Provide technical assistance and capacity building for CDR policy, focused on quantification

Vision

A carbon removal industry that is transparent, accountable, and worthy of public investment

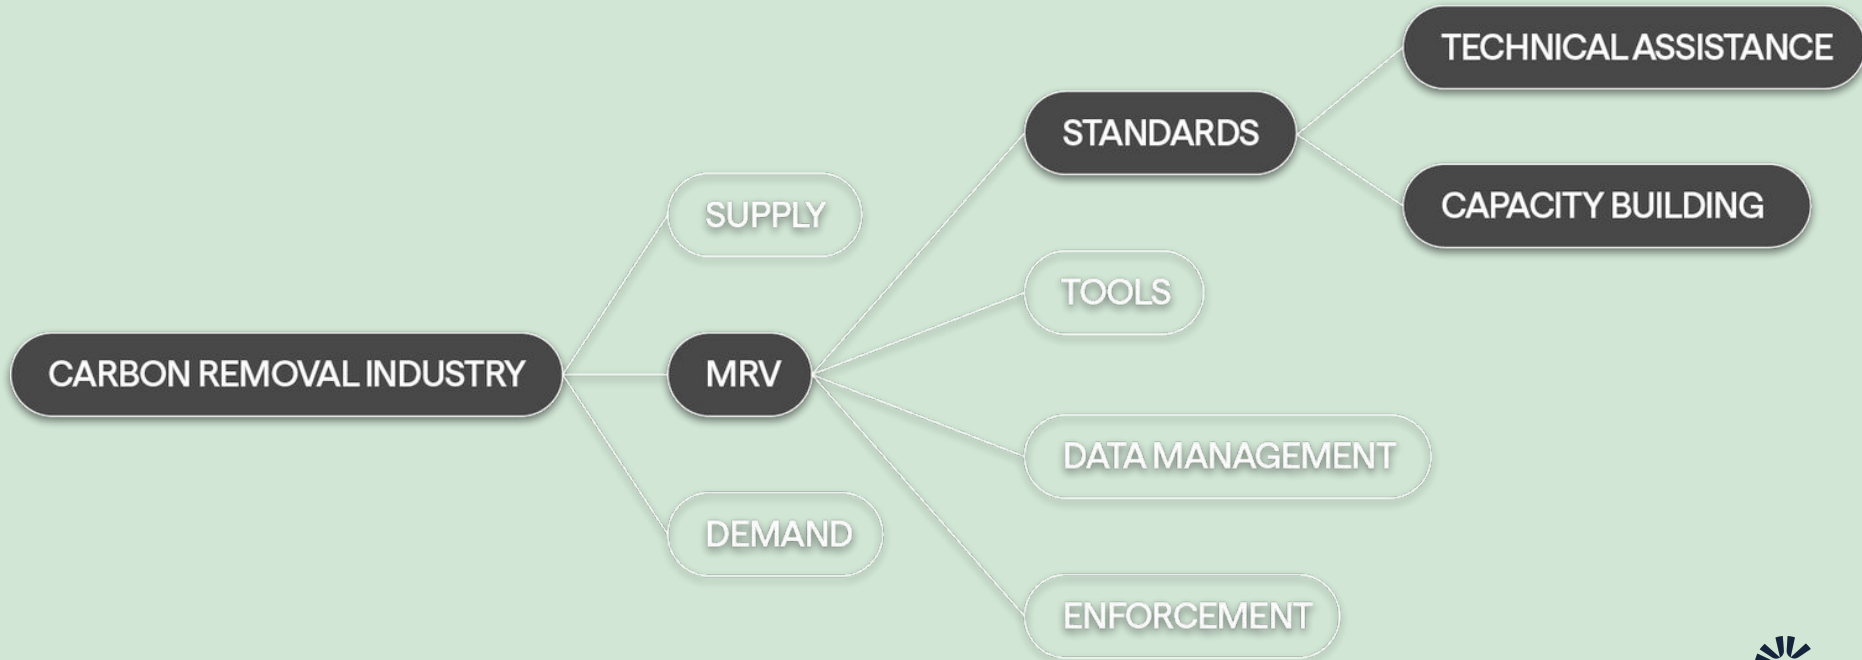

Our North Star

**Justice requires accountability and justice
in carbon removal requires the ability to
count the carbon.**

Our Role in the CDR Ecosystem

1

Knowledge Management: understanding what already exists and where there are important gaps

2

Draft technical guidance where none currently exist, to progress the discussion around standardization

3

Participate in standards development processes that are already underway as a civil society representative

4

Catalyze research where the evidence base for standardization does not yet exist

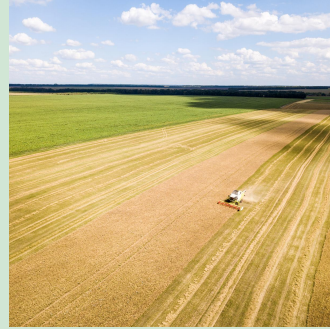

Our Current Projects

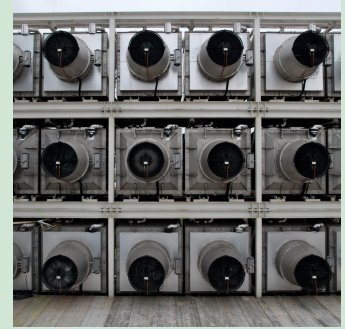

Standards
