What's it like to live next to a Refinery or Oil Drilling? What are they doing to *your* planet? What's happening with fossil fuel phaseout?

Alicia Rivera, CBE, April 22, 2025, CA Climate Summit, Sacramento

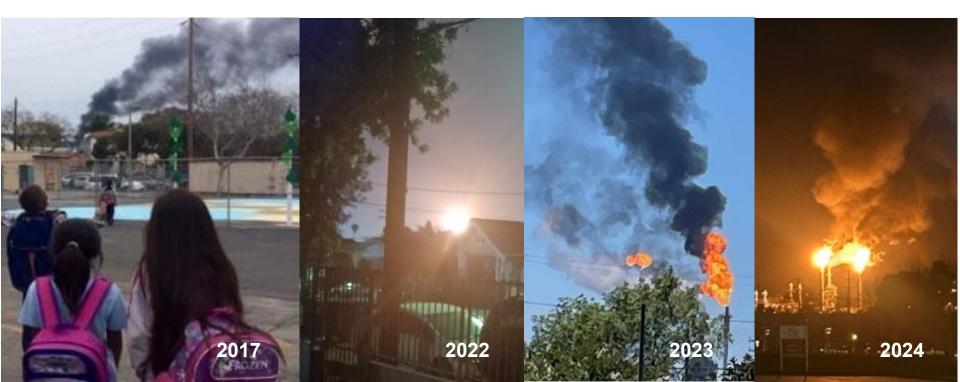

## What is happening with California Refineries?

 Transportation electrification policy is working! Demand for gasoline is going down.

- Two Northern California refineries stopped gasoline production in 2020 and 2024 (now biofuels),
- Phillips 66 in LA will close at the end of this year.
- Even with those 3 major refineries closing, California still has enough capacity on average for the time being, because of lowering demand.

COMMUNITIES FOR A BETTER ENVIRONMENT established 1978 The Phillips 66 LA closure cuts two ways – 1) A welcome surprise to neighbors – adults and children are exposed to smoke and ongoing pollution; sometimes not allowed to go out and play. People next to refineries have high levels of respiratory illnesses and cancer. 2) Devastating to hundreds of refinery workers, losing high-paying jobs, and needing support.

Why do we need to manage phase out of refineries and oil drilling? Because they are killing people and the planet.

- Frontline refinery communities face repeated flaring, explosions, fires, continuous, invisible pollution, asthma, cancer risks.
- Our people also live next to oil drilling, like this site of a crude oil pipeline rupture onto a major public street.

COMMUNITIES FOR A BETTER ENVIRONMENT

We have some **STATEWIDE** tools – but need beefing up, and the state is not attempting to *regulate* refinery phaseout, just to mitigate impacts

- Clean Air Act & Smog Plans
- SBX1 & ABX21
- The GHG Scoping Plan and other State Policies
- Refinery Safety Policies
- State funding for worker and community transitions

Fossil fuel destruction is far-reaching and heart-breakingly obvious, but let's say it again anyway:

- Thousands die in California due to mobile sources;
- Can't meet Smog standards without phaseout; and
- Climate disasters are alarmingly tragic, only to get worse.

# LOCAL ORDINANCES for transition need to be much stronger, with more community and worker input:

- Phase out polluting land uses (eg re-adopt LA's Oil Drilling phaseout)
- Land and water cleanup after phaseout
- Polluter Pays into transition funds (like the Chevron Richmond model)
- City and County of LA transition ordinances and policies on closure

#### **COMMUNITIES WANT A CLEAN ECONOMY**

- Green energy & good jobs,
  Grocery stores,
  Restaurants,
- Green spaces,
  Adequate housing,
  Clean soil, water, and air,
- Walkable communities,
  Inclusion in decision-making for new projects,
  - No polluting projects.
